

Our Company

C&H Pipe Services, Inc. has been providing exceptional Pipe Bucking and Computer-ized Torque Monitoring Services to the petroleum industry for over four decades. Our immaculate fleet and highly skilled team of technicians are available 24 hours a day, 7 days a week.

Our Services

"Standard Mark" Portable Bucking Machines

Designed and fully equipped to handle the following oilfield tubulars and accessories:

- * Tubing and Casing: Pipe OD" from 2 3/8" to 20.00"
- * Drill Pipe: Tool Joint OD" from 2 7/8" to 8.50"
- * Drill Collar/ subs or doubles: Pipe OD" 2 7/8 to 9.50"
- * Up to 150,000 ft./lbs. of Torque

"No Mark" Portable Bucking Machines

Many of our customers prefer our low stress or non-marking tong units for their high alloy chrome tubulars. If you wish to eliminate penetration on the pipe which could potentially cause corrosion in the well, then no-mark is your solution. We are equipped to handle special chromium steels in pipe sizes up to 7" OD.

Computerized Torque Monitoring (CTM)

Our computerized torque monitoring system is widely recognized as the most advanced and reliable system in the industry. It will chart a connection make and break, graph RPM's in real time, accurately records your ft/lbs of torque and measure turn revolutions of at least 1/20,000.

Call or E-mail us today for a competitive price quote.
